BIOGRAPHY

Dr. Camille Wardrop Alleyne is an entrepreneur, rocket scientist, internationally acclaimed speaker, and 29-year NASA veteran who dedicated her career to advancing the areas of space technology development.

In the highly technical fields of science and engineering where women are underrepresented, she is one of the most recognized in the space industry and the first African American to lead a major human space flight program at NASA.

Throughout her illustrious career, she led the strategy for the commercialization of space, enabling \$B space economies in low earth orbit and on the moon. She is also one of the leading voices in the areas of space, science and technology application in sustainable development, specifically focused on developing countries.

Dr. Alleyne is currently the Founder and CEO of Arusha Space, a global space solutions and consulting company. Her visionary leadership now extends to using space to solve Earth's greatest challenges.

Additionally, she is a trailblazer in revolutionizing global science and space education for girls, through the work of the Brightest Stars Foundation, an international non-profit organization she founded in 2007.

Dr. Alleyne has been recognized by numerous US and international organizations for her extraordinary accomplishments in the space field.

FOUNDER & CEO

ENTREPRENEUR

Dr. Alleyne is the Founder and CEO of Arusha Space LLC, a US-based global space solutions and consulting company that focuses on using space to solve Earth's greatest challenges. We use space-based technologies to develop solutions that empower governments and private sector to chart a path that creates value.

We also work at the intersection of satellite big data and space commerce developing products that inform development challenges on Earth, enable space solutions and empower decision makers.

Built on decades of experience leading multi-billion-dollar programs at NASA and other parts of the world, we develop strategies that leverage capabilities, resources and markets to enable the development of globally-recognized and sustainable space programs.
